Managing exponential growth in email volumes has become a **big problem** for your business

It's time to recognise that email is now one of your business's most critical applications.

- Industry experts IDC predict that over **60 billion** emails will be sent every day this year¹
- **80%** of business users prefer to communicate by email rather than picking up the phone²
- **75%** of a business's intellectual property is held in its email system³

Managed Services

So what is this costing your business?

Typically, an estimated **70% of all data becomes inactive after 30 days**, with enterprise servers quickly becoming overloaded with unused information.

Storage and management costs soar. Critical business information is difficult to retrieve. Mailbox management takes priority over running your business. Email systems become unstable. User frustration grows and creating any kind of structured corporate intelligence is a seemingly impossible task. At the same time, regulatory and compliance pressures are here to stay.

Save time. Save money. Minimise risk

A unique email archiving service from InTechnology reduces the cost and effort of storing, managing and accessing the content held on your email systems. Powered by industry-leading Symantec Enterprise Vault, this service:

- **Frees up** more expensive storage resources and controls mailbox growth
- **Simplifies** email management for administrators and users
- **Accelerates** email retrieval, saving massive amounts of time and money
- **Helps you exploit** the business knowledge held in email
- **Streamlines** email upgrades, migration and consolidation

In providing an economical, long-term repository, InTechnology's Email Archiving Service protects your information assets throughout their lifecycle. This helps you meet your legal obligations on data retention and disclosure.

Stay in control

InTechnology's Email Archiving Service automatically applies a consistent, policy-driven approach to email retention. InTechnology works with you to set and implement archiving policies in line with the needs of your business and users.

Managing your information in a secure InTechnology facility frees in-house resources and gives you in-built business continuity benefits, too. You have the reassurance of knowing that your information is being safeguarded by a provider already entrusted with over 2,500 terabytes of business critical information.

InTechnology's Email Archiving Service incorporates Symantec Enterprise Vault, which has led Gartner's 'Magic Quadrant' for vendors of email active-archiving products two years running and has 32% of the email archiving market.

An effective solution to email overload

InTechnology's Email Archiving Service operates on a **per-user, pay-as-you-go** basis – from as little as just **£1 a month per user**. Simple, predictable and flexible, this pricing model supports your business evolution.

Get your first three months of the service free of charge! But hurry – this offer is only available on contracts signed by 30th September 2006.*
